ILLINOIS HOUSING
MARKET
forecast

Illinois Housing Market Forecast April 2026

The goal of this report is to provide timely housing market data and market projections to inform the Illinois real estate industry, prospective homebuyers and sellers, and the public.

This report highlights trends in housing market activity through March 2026 for the State of Illinois, the Chicago Metro Area, and the City of Chicago. For each geographic area, this report summarizes total closed sales activity for single-family homes, condominiums, and townhomes and then summarizes a set of key housing market indicators to highlight recent trends and current conditions for closed single-family property sales activity, median sales prices, time on market, inventory, and homebuyer affordability. For the Chicago Metro Area and City of Chicago, the report also includes data on recent foreclosure activity. Based on these and other housing market and economic data, the Institute for Housing Studies developed a three-month outlook to estimate potential changes in homebuying activity and house prices. Additionally, the report includes supplemental tables and charts summarizing recent and longer-term trends to provide additional context on housing market activity.

The March 2026 data highlight the continuation of recent trends where a still-limited supply of for-sale housing (as indicated by persistently low inventories) and competitive real estate markets (as indicated by short time on market) are contributing to continued rising prices in Illinois, the Chicago region, and the City of Chicago. Mortgage rates, after falling for most of the past year, rebounded in March. Closed sales activity statewide and in the Chicago region was higher than levels during March 2025. Single family sales prices statewide and in the Chicago region were higher than they were a year ago. In the coming months, levels of single-family sales activity statewide and in the Chicago region are expected to follow seasonal trends and continue rising, with more anticipated sales activity than during the same period a year earlier. Home prices statewide are expected to be similar to the previous year's prices through June 2026.

State of Illinois

- **Recent trends** – In March 2026, there were 10,075 closed sales of single-family homes, townhomes, and condominiums in Illinois. March prices for single-family homes in Illinois were 7.6 percent higher than prices a year earlier. Single-family closed sales activity levels were about 3.8 percent higher than levels in March 2025. The inventory of for-sale single-family homes fell about 7 percent compared to the previous March, remaining near historic lows. The average number of days on the market for a single-family home was one day more than during the previous March. Affordability conditions for single-family homebuying were worse than the previous year.
- **Three-month outlook** – IHS’s three-month housing market forecast indicates that closed sales activity levels will follow seasonal trends, rising about 49.3 percent between March and June. Total sales activity during the three-month period from April to June is expected to be 2.5 percent higher than during the same period a year earlier. Single-family house prices are estimated to rise about 5.3 percent between March and June. In this projection, statewide prices in June 2026 will be approximately even with prices in June 2025.

Chicago Metropolitan Area

- **Recent trends** – In March 2026, there were 6,928 closed sales of single-family homes, townhomes, and condominiums in the Chicago Metro Area. Prices for single-family homes in the Chicago Metro Area rose almost 3 percent between March 2025 and 2026. The number of closed single-family home sales in the Chicago area grew 5.5 percent from the previous March. The inventory of for-sale single-family homes fell about 14 percent since the previous March. The average time spent on the market fell by 2 days compared to March 2025. Affordability conditions for single-family homebuying in the Chicago Metro Area were consistent with last year’s levels.
- **Three-month outlook** – IHS’s three-month housing market forecast indicates that the level of closed sales activity for single-family homes will follow seasonal trends and rise about 52 percent between March and June. Total sales throughout April, May, and June are estimated to be about 2.5 percent higher than during the same period a year earlier. Prices of single-family homes in the Chicago metropolitan area are projected to increase 5.6 percent between March and June. In this scenario, prices in June 2026 would be approximately equal to prices in June 2025.

City of Chicago

Single-Family Homes

- **Recent trends** – In February 2026, there were 1,766 closed sales of single-family homes, townhomes, and condominiums in the City of Chicago. Prices for single-family homes in the City of Chicago were about 1 percent higher than in March 2025. The number of closed single-family sales in Chicago fell by about 4 percent compared to the previous March. The inventory of for-sale homes declined by 28.4 percent compared to March 2025, and the number of days on market fell by 8 days compared to the previous year. Affordability conditions for single-family homebuyers in Chicago were slightly better than the previous March.
- **Three-month outlook** - IHS's three-month housing market forecast indicates that the level of closed sales activity will follow seasonal trends and increase 36.7 percent between March and June. Total sales during the three-month period from April to June are estimated to be about 4.5 percent lower than the same period a year earlier. Single-family house prices in the City of Chicago are expected to increase by roughly 7.5 percent between March and June. Prices in this scenario would be about 1.4 percent lower than in June 2025.

City of Chicago

Condominiums and Townhomes

- **Recent trends** – Prices for condos and townhomes in the City of Chicago rose 8.7 percent between March 2025 and 2026. The number of closed condo sales in Chicago decreased by about 4.4 percent compared to the previous March. The inventory of for-sale condos declined by about 29 percent compared to March 2025. The number of days on market fell by 5 days compared to the previous March.
- **Three-month outlook** - IHS's three-month housing market forecast indicates that the level of closed condominium sales activity will follow seasonal trends and increase by 41.3 percent between March and June. Total condominium sales activity in Chicago from April to June is estimated to be about 0.5 percent higher than during the same period a year earlier. Condo prices are projected to increase 2.8 percent between March and June. These projected June prices would be 10.0 percent higher than in June 2025.

Conditions Affecting Homebuying

The housing market remained complex during the beginning of 2026 due to a variety of high-level factors. The [rate of inflation](#) rose steeply in March as the ongoing conflict in Iran drove up [energy costs](#). The Federal Reserve has [kept rates steady](#) so far in 2026, largely due to concerns about rising inflation. Relatedly, the [consumer sentiment index](#) fell to a record low. [Hiring numbers](#) in March were stronger than expected. National [unemployment](#) fell slightly between February and March, while remaining above last year's rate. The Illinois [unemployment rate](#) grew slightly between January and February, landing 0.3 percent below the previous year's rate and 0.5 percent above the national rate. Foreclosure activity levels were slightly lower than the previous year in both the City of Chicago and the Chicago metropolitan area, though nationwide foreclosure activity during March was [higher than in March 2025](#). Overall, Chicago area foreclosure activity remains below pre-pandemic levels.¹

These indicators highlight ongoing challenges and opportunities in the current homebuying market. After mortgage rates [dropped below 6 percent](#) in February, rates [quickly rebounded](#) after the Iran conflict began. Prices are still elevated nationally, with the [Case Shiller Home Price Index](#) reaching another all-time high in January. National inventories of for-sale homes have [maintained](#) year-over-year growth, though this growth is slowing. In March 2026, Illinois single-family inventories continued to show year-over-year declines, and the state continues to have [among the weakest recoveries](#) to pre-pandemic inventory levels. The ongoing statewide inventory shortage suggests that the market will remain highly competitive and challenging for homebuyers throughout the near future. Continued economic uncertainty makes it difficult to predict how homebuyers will react to these trends.

About the Institute for Housing Studies at DePaul University's (IHS) Housing Market Forecast Model

The IHS Housing Market Forecast is designed to help the public understand how current housing market and economic characteristics might affect conditions for home buying and selling in the coming months. The outlook is based on a forecasting model that is updated monthly and incorporates data on current and historic housing market activity. The Institute for Housing Studies uses a forecasting model known as an Autoregressive Integrated Moving Average (ARIMA) which integrates historical data to predict future housing prices, taking into account the patterns, trends, and seasonal variations identified from past data. The underlying data used in the market forecast and price indices, as well as summary statistics, are from ShowingTime. The Chicago Metro Area includes Cook, DeKalb, DuPage, Grundy, Kane, Kendall, Lake, McHenry and Will Counties.

¹ For Chicago area data on foreclosure activity, see the Appendix
